Systems Advisers Group

Systems Advisers Group (SAG) is a leading system integration company based in Thailand with a global reach. With constant advances in the information technology field the need for software integration work has become a major necessity for all organizations. As technology advances many firms have to upgrade or establish new solutions to handle their growing needs. SAG's strength is our ability to identify the growing pains that organizations face and our subsequent action in designing efficient software and hardware solutions that help organizations move toward their long-term growth.

SAG's integration services have been in the area of turnkey Billing solutions for major service providers in the region. Some of our key clients in Thailand are Cable Thai Holdings (CTH) and Communications Authority of Thailand (CAT). Billing solutions for these service providers are extremely challenging types of integration work because it involves integration with many unique systems. One system would be the core communications network of the service provider to receive real-time usage of the network by each individual user to perform a real-time rating of their usage. There is also the necessity to verify accounts validity in order to provide the service. The complexities are numerous and this had lead to a global shortage of companies that are able to provide the system integration work in this unique field. The global market is in great demand today for the few companies and individuals that are able to understand and deploy such solutions.

Systems Advisers Group

SAG is a leading systems integrator with a specialty in integrating major information technology solutions from major vendors such as: Oracle, HP, Cisco, and many others.

Due to our explosive growth, we are pleased to welcome highly motivated and energetic candidates to join us with attractive salary plus fringe benefits for the following positions:

Description: Network Engineer

Network Engineer Job Duties:

- Establishes networking environment by designing system configuration, directing system installation, defining, documenting, and enforcing system standards.
- Maximizes network performance by monitoring performance, troubleshooting network problems and outages, scheduling upgrades, collaborating with network architects on network optimization.
- Secures network system by establishing and enforcing policies, defining, and monitoring access.
- Reporting network operational status by gathering and prioritizing information, as well as managing projects.

Skills/Qualifications:

Networking experience preferred but not required. We are willing to train qualified candidates.

Degree Requirement:

Bachelor Degree or higher in Computer Engineering, Computer Science, or related fields

To apply for this opportunity please submit your cover letter and resume to:

Khun Petchnoi Chatkaew
